

REPAY REALTIME ELECTRONIC PAYMENTS

AKUVO offers a fully integrated “connector” to REPAY Realtime Electronic Payments. This allows financial institutions to provide account holders with easy and convenient payment options throughout the collections lifecycle.

Features

1. Seamless Integration

The communication between AKUVO and REPAY is 100% seamless. REPAY launches directly within AKUVO’s platform when taking a payment. Users are authenticated automatically so there is no need for additional logging in or navigation into or out of different platforms.

2. Data Visibility

When payments are taken through REPAY, AKUVO automatically imports the transaction data into the account workspace. This data is readily available for viewing within the AKUVO platform, providing comprehensive visibility into information such as who collected the payment, from which source, at what time, etc. Centralized data access streamlines reporting and facilitates informed decision-making for management.

3. Automated Data Exchange

AKUVO automates the exchange of account and account holder data between its platform and REPAY. This eliminates the need for additional manual effort on the collector’s side, reducing the possibility of human error. Automated data exchange enhances efficiency and accuracy in the payment collection process.

4. Convenient & Simple Payment Options

Collectors can leverage REPAY’s embedded payment technology to manage the full payments lifecycle and offer account holders a streamlined, convenient payment experience that can be accessed AKUVO’s side panel. Options include Credit Card Payment, ACH Payment, and more.

5. Secure & Compliant

Both AKUVO and REPAY take security and compliance very seriously. REPAY is a trusted partner to help achieve and maintain compliance for every payment, even as requirements and standards evolve.
